DETAILED ACTION

Request for Continued Examination

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 6/25/03 and 8/25/03 has been entered.

Claim Objections

2. Claims 14, 15, 18-30, and 33 are objected to because of the following informalities:

- a. Claim 14, last line, "a central portion of the coils" should be "central portions of the coils".
- b. Claim 18, last line, "a central portion of the coils" should be "central portions of the coils".
- c. Claims 19-30 and 33 are identical to claims 2-13 and 31, respectively; therefore, claims 19-30 and 33 should be cancelled.

Appropriate correction is required.

Claim Rejections – 35 U.S.C. §102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 14-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Hinotani et al., JP 08-063022 (cited in previous Form PTO-892).

Hinotani et al. discloses an image forming apparatus/method, comprising: means (or a step) for sandwiching a sheet between a fixing roller 10 and a pressing roller 11; means (or a step) for induction heating the fixing roller 10 with a center-section coil 22b and an end-section coil 22a, the center-section coil 22b and the end-section coil 22a being arranged inside the fixing roller 10 in an axial direction so as to leave a space 33 between the center-section coil 22b and the end-section coil 22a (Figures 11(A) and 13); means 17 (or a step) for turning off power applied to the coils 22a and 22b when an overheated condition occurs in which the temperature of a first surface of the fixing roller is more than a predetermined temperature (paragraph [0020]); and the space 33 being configured such that the temperature of the first surface of the fixing roller 10 opposing the space 33 being not higher than the temperature of a second surface opposing central portions of the coils 22a, 22b (Figure 15 and abstract – inherently, because the abstract discloses the temperature distribution is uniformly along the rotation axis of the fixing roller even if a gap is installed between coils).

Hinotani et al. further discloses the center-section coil 22b and the end-section coil 22a being simultaneously turned on and heated (Figures 7 and 8).

Allowable Subject Matter

5. Claims 2-13, 31 and 32 are allowed.
